GAP — Not Available

01	Maturity Reminder with Action Plan Module 05 — Maturity Reminder · Automated reminders when a product matures, with a detailed action plan including talking points. Detects maturities within 30/60/90-day horizon from Oracle ADB AI generates reinvestment recommendation action plan per customer Action Plan Follow-up button, share via Email / WhatsApp Talking points are reinvestment-focused; not structured per customer dialogue script System is ON-DEMAND only — no automated push/email notification scheduler No supporting documents or product brochures attached to reminders
02	Product Profile Matching & Recommendation Module 06 — Product Recommendations · List of products matching the customer's profile with justification, details, risks, and goals alignment. Profile Matching: risk tolerance, portfolio gaps, transaction history Recommendation List: ranked products with fit score per customer Recommendation Justification: multi-factor AI scoring + Bahasa rationale Product Details: fit score & rationale shown; explicit risk/benefit/tenor per product not confirmed Recommendations are batch/portfolio-wide — no per-customer on-demand lookup No product detail sheet or brochure link shown alongside each recommendation
03	Portfolio Alerts with Actionable Insights Module 08 — Portfolio Alerts · Alerts for significant portfolio changes with reason, affected assets, and actionable recommendations. Alert triggers: Churn Risk, Idle Funds, KYC Expiry, Maturity, AUM Drop Per-alert card: affected investment, reason, severity badge AI-generated remediation steps ranked by impact; link to Customer 360 Suggested actions include discuss/review; direct rebalancing workflow not present Alert parameters NOT configurable by Product Team — criteria are system-hardcoded Market-event-driven alerts (e.g. IHSG drop, rate hike) not implemented

OVERALL VERDICT: PARTIALLY MET — Gaps Identified

GOAL & BENEFIT

Goal: Receive automated reminders when a product matures, with a suggested action plan.

Benefit: RM can immediately strategize a rearrangement strategy for customers.

Module: [Module 05 — Maturity Reminder](#)

WHAT IRM CURRENTLY PROVIDES

- ✓

Detects upcoming maturities within 30/60/90-day configurable horizon
- ✓

AI generates personalized reinvestment recommendation per customer
- ✓

Action Plan Follow-up CTA available after each analysis result
- ✓

Share via Email and WhatsApp for direct customer outreach

ACCEPTANCE CRITERIA GAPS

PARTIAL

Action Plan Format

The action plan provides reinvestment product suggestions but lacks a structured customer dialogue script with specific talking points (e.g., objection handling, yield comparison narrative, persuasion cues).

GAP

Automated Push Notifications

System is ON-DEMAND only: RM must manually trigger analysis. There is no scheduled push notification, email alert, or in-app reminder that fires automatically when a product reaches maturity date.

GAP

Supporting Documents

Reminders do not include attached product brochures, term-sheet PDFs, or factsheet links to support the conversation. RM must source these separately.

PARTIAL

Specific Criteria Scope

Acceptance criterion: "Each reminder includes a detailed action plan with specific talking points and supporting data." Current output is AI-text only, without structured per-product documentation.

RECOMMENDATIONS FOR IMPROVEMENT

1

Add scheduled job (cron/Oracle DBMS_SCHEDULER) to push maturity alerts automatically

2

Structure action plan output with labelled sections: Opening, Value Proposition, Objection Handling, Close

3

Attach product factsheet URL or PDF link to each recommended reinvestment product

4

Integrate notification channel: in-app badge + optional email digest

5

Allow RM to set personal reminder horizon (e.g., alert me 14 days before maturity)

OVERALL VERDICT: PARTIALLY MET — Gaps Identified

GOAL & BENEFIT

Goal: See a list of products that fit the customer's profile with justification and product details.

Benefit: RM can confidently recommend the most suitable products for each customer.

Module: Module 06 — Product Recommendations

WHAT IRM CURRENTLY PROVIDES

- ✓

Profile matching uses: risk tolerance, portfolio gaps, transaction history, market context
- ✓

Ranked recommendation list with fit score + AI rationale (Bahasa Indonesia)
- ✓

Multi-factor scoring: portfolio gap, risk alignment, AUM potential, urgency
- ✓

Share CTA + Action Plan Follow-up per recommended customer

ACCEPTANCE CRITERIA GAPS

PARTIAL

Product Details per Recommendation

Each recommended product should show: benefits, risks, tenor/duration, projected return, and alignment with customer goals. Current output shows product name + fit rationale but does not display a full product detail card.

GAP

Per-Customer On-Demand Lookup

Recommendations are generated as a batch for the entire RM portfolio. There is no "recommend products for THIS customer" feature accessible directly from the Customer 360 profile page.

GAP

Product Catalog Detail Page

No product brochure or detail sheet is linked or displayed alongside each recommendation. RM cannot drill into product terms, rates, or risk rating from within the platform.

PARTIAL

Customer Goal Alignment

Criterion: "alignment with customer goals." The system uses risk profile and AUM; explicit customer financial goals (retirement, education, etc.) are not captured or used as a matching dimension.

RECOMMENDATIONS FOR IMPROVEMENT

1

Add Product Detail panel/modal: show tenor, return rate, risk rating, min invest, and goal tag

2

Add "Get Recommendations" button on Customer 360 profile for per-customer on-demand reco

3

Capture customer financial goals during onboarding and use as a reco filter dimension

4

Link product factsheet PDF or bank product page URL alongside each recommendation card

5

Show product comparison view (side-by-side) for top-3 recommended products

OVERALL VERDICT: PARTIALLY MET — Gaps Identified

GOAL & BENEFIT

Goal: Receive alerts for significant portfolio changes/issues with reason, affected assets, and actionable recommendations.

Benefit: RM can promptly address significant changes and take appropriate action to manage portfolios effectively.

Module: Module 08 — Portfolio Alerts

WHAT IRM CURRENTLY PROVIDES

- ✓

Alert categories: Churn Risk, Idle Funds, KYC Expiry, Maturity Approaching, AUM Drop
- ✓

Per-alert card: affected investment name, risk type, severity badge (Critical–Low)
- ✓

AI-generated root-cause explanation and ranked remediation steps
- ✓

One-click Customer 360 link for immediate in-depth investigation

ACCEPTANCE CRITERIA GAPS

GAP

Product-Team Configurable Parameters

Criterion: "alerts triggered based on predefined criteria that can be set by Product Team." Current alert triggers (churn threshold, AUM drop %, idle days) are hardcoded in the system. There is no configuration UI for Product Team to set or adjust alert parameters.

GAP

Market-Event-Driven Alerts

No alerts are triggered by external market events (e.g., IHSG drops >3%, BI Rate change, USD/IDR volatility). Alerts are purely portfolio-level, not market-condition-aware.

PARTIAL

Direct Rebalancing Workflow

Criterion: "actionable insights such as rebalancing assets or selling underperforming investments." Current alerts provide text recommendations only; no in-platform workflow exists to directly initiate a rebalancing or sell action.

GAP

Underperforming Asset Detection

No alert type specifically monitors for underperforming assets against benchmark returns. Current alerts focus on lifecycle events (maturity, KYC), not performance.

RECOMMENDATIONS FOR IMPROVEMENT

1

Build Admin/Product Team configuration panel for alert thresholds (AUM drop %, idle days, etc.)

2

Integrate market-event triggers: connect to live market data feed → fire alerts on IHSG/rate events

3

Add "Underperforming Asset" alert type comparing holding returns vs. benchmark/peer

4

Add direct action buttons in alert: "Schedule Discussion," "Initiate Rebalancing," "Create Follow-up Task"

5

Enable RM to subscribe/unsubscribe to specific alert categories per customer segment
