

Maturity Reminder AI Analysis

Friday, 05 June 2026 22:59

SITUATION SUMMARY

Action needed this week: Bapak Budi Santoso has a Deposito of **Rp 750,000,000 that matures in 7 days** on 23 May 2026. If the RM does not reach out before this date, the funds will sit idle or auto-rollover at a lower standard rate — a missed opportunity to deepen the relationship and grow his returns.

During a call to our service centre in March 2026, Bapak Budi asked about ORI-027 interest rates — which tells us he is already thinking about where to put his money next. This is the perfect moment to have that conversation.

Separately, Bapak Budi's credit card payment was missed last month (Rp 2,500,000). This is the first time in 2 years, so it is likely just an oversight. Mention it gently at the end of the meeting — do not lead with it.

ABOUT THIS CUSTOMER

Bapak Budi is 58 years old with two stable income streams: a **pension of Rp 28,000,000/month** from BPJS, plus **rental income of Rp 17,000,000/month** from two property units — totalling Rp 45,000,000 every month without needing to work. This makes him very financially secure.

He has a total of **Rp 1.25 billion** in savings and investments with Danamon, placing him firmly in our Nasabah Prioritas group. He is not a risk-taker — he wants his money to be safe and to earn a steady income from it, like interest or coupons.

His past discussions with the RM and his service centre calls confirm he prefers products that pay out regular income, rather than products whose value goes up and down with the market. This guides all three options below.

SUGGESTED TALKING POINTS FOR THE MEETING

"Bapak Budi, deposito Bapak akan jatuh tempo dalam 7 hari. Kami sudah siapkan beberapa pilihan terbaik agar dana ini tetap menghasilkan untuk Bapak — ada yang dijamin pemerintah dan ada yang lebih fleksibel. Boleh saya jelaskan?"

Remind him that when the deposit matures, the money should not sit idle — even a few weeks without placement costs him potential income. At Rp 750M and 6% interest, every month of delay costs approximately Rp 3,750,000 in missed returns.

Reference his ORI-027 enquiry from March: "*Bapak pernah tanya soal ORI-027 — kebetulan sekarang masih ada dan bunganya 6.5% per tahun, dijamin pemerintah.*" This shows you were listening and builds trust immediately.

If he asks about the credit card: "*Kami lihat tagihan bulan lalu belum terbayar — apakah ada yang bisa kami bantu atur? Kami bisa pasangkan auto-debet agar tidak terlewat lagi.*" Keep it brief and helpful, not confrontational.

THREE REINVESTMENT OPTIONS — WHAT HAPPENS TO ALL Rp 750M

Option 1 Recommended · Safe Income

Rp 500M → ORI-027 Government Bond @ 6.5% p.a.

Rp 250M → Deposito Reguler auto-rollover @ 5.5% p.a.

Total income/year Rp 46,250,000

Rp 500M yield Rp 32,500,000 (ORI-027 coupon)

Rp 250M yield Rp 13,750,000 (Deposito interest)

Why split Rp 500M into ORI-027 and keep Rp 250M in Deposito? ORI-027 is a government bond — the maximum individual purchase per series is typically Rp 500M, so the remaining Rp 250M stays in a regular Deposito to keep earning. The ORI-027 portion earns a higher rate (6.5%) while the Deposito provides easy access to cash if needed. This is the best combination of high return and security for his profile.

🔔 ORI-027 subscription window closes 30 May 2026 — act before maturity date.

Option 2 Simplest — No Change Needed

Rp 750M → Deposito Spesial rollover @ 6.2% p.a.

Total income/year Rp 46,500,000

Difference vs Option 1 Rp +250,000 more per year

Why consider this? If Bapak Budi does not want any changes or paperwork, rolling the full Rp 750M into the Deposito Spesial rate of 6.2% is the path of least resistance. He earns slightly more than Option 1 in pure rupiah terms (Rp 46.5M vs Rp 46.25M), but his money is locked in one product with no government bond backing. Best for customers who want zero disruption.

Option 3 Best Flexibility — Liquid Reserve

Rp 500M → ORI-027 Government Bond @ 6.5% p.a.

Rp 250M → Reksa Dana Pasar Uang (Money Market Fund)

Total income/year ≈ Rp 45,750,000

Rp 500M yield Rp 32,500,000 (ORI-027 coupon)

Rp 250M yield ≈ Rp 13,250,000 (est. 5.3% money market)

How is Option 3 different from Option 1? Both options put Rp 500M into ORI-027. The key difference is what happens to the remaining Rp 250M. In Option 1 it goes into a fixed Deposito (locked for 1–3 months, predictable interest). In Option 3 it goes into a Money Market Fund — which can be withdrawn any business day if Bapak Budi needs cash urgently, for example for medical expenses or a large purchase. Option 3 earns very slightly less than Option 1 but gives full liquidity on the Rp 250M portion.

CREDIT CARD — HOW TO RAISE IT

The missed payment of Rp 2,500,000 is very small compared to his Rp 1.25B in savings — this is almost certainly a forgotten payment, not a sign of financial difficulty. Do not let this overshadow the reinvestment conversation.

Offer to set up automatic payment (auto-debet) from his Danamon savings account to the credit card each month. This takes 5 minutes to arrange and means it can never be missed again. It is a small action that shows you are looking after the whole picture, not just selling a product.

YOUR ACTION PLAN

Today: Call or send a WhatsApp message to Bapak Budi. Confirm he knows the deposit matures in 7 days and schedule a meeting (phone or branch) within the next 3 days. Do not wait for him to call you.

Before the meeting: Print or prepare a simple side-by-side comparison of all 3 options showing the projected annual income in rupiah for each. Showing Rp figures (not just percentages) makes the choice easier and more real for the customer.

At the meeting: Walk through all 3 options. Let Bapak Budi choose — do not push one too hard. Record his preference in the system even if he asks for more time to decide.

At the meeting: Offer to set up the CC auto-payment. Takes 5 minutes and leaves a strong positive impression.

After the meeting: Update the customer record in the system within 24 hours. Set a follow-up reminder 90 days before the next product maturity date so this situation never happens at the last minute again.
