

Portfolio Alert AI Analysis

Friday, 05 June 2026 23:31

WHAT HAPPENED — QUICK SUMMARY

! **Action needed today:** Bapak Reza Pratama's equity fund (Reksa Dana Saham) has dropped **18.3% over the past 30 days**, resulting in a paper loss of approximately **Rp 45,750,000**. This has triggered an automatic alert because the loss crossed the 15% threshold set by the Product Team.

! His total portfolio value has fallen from approximately Rp 500,000,000 to **Rp 454,250,000**. RM Dewi Susanti needs to reach out to Bapak Reza **today — before he notices the drop on his own**. A proactive call makes a huge difference to customer trust in moments like this.

✓ **The good news:** The rest of his portfolio is completely fine. His Government Bond ORI-025 (Rp 150M) is still earning positively at +2.1% this year, and his Deposito (Rp 100M) is untouched and matures in 45 days. Only the equity fund is affected — his overall portfolio is down 9.15%, not his entire savings.

WHY DID THIS HAPPEN?

→ This is not specific to Bapak Reza — the entire stock market has been affected. The Jakarta Stock Exchange (JCI) fell **8.2% over the same 30 days**, driven by rising trade tensions between the US and Asian countries, which caused investors globally to pull money out of stocks and move to safer assets.

→ The Rupiah has also weakened against the US Dollar (now at Rp 16,450 per USD), which hurts companies that import goods — and these companies make up a large part of the equity fund's holdings. That is why the fund dropped more than the market overall.

✓ **Historical context that will reassure the customer:** A very similar drop happened in March 2020 — the stock market fell around 19% in 30 days due to COVID. Within 5 months, the market had fully recovered. Customers who stayed invested came out ahead. Customers who sold locked in permanent losses.

HOW BAD IS THE DAMAGE — IN NUMBERS

Portfolio Snapshot Today As of 16 May 2026

Reksa Dana Saham (original) Rp 250,000,000

Reksa Dana Saham (today) ≈ Rp 204,250,000

Paper loss (equity fund) — Rp 45,750,000 (−18.3%)

ORI-025 Government Bond Rp 150,000,000 (+2.1% ✓)

Deposito (matures in 45 days) Rp 100,000,000 (safe ✓)

Total portfolio today ≈ Rp 454,250,000

Overall portfolio change — 9.15% (not −18%)

Important framing for the RM: The 18.3% drop only applies to the equity fund portion. When you look at his whole portfolio — bonds, deposit, and equity fund together — the overall decline is 9.15%. This is a more reassuring number to share with the customer first. Do not lead with "your fund dropped 18%" — lead with "your overall portfolio is at Rp 454M, let me walk you through what happened."

YOUR ACTION PLAN

! **Today — call Bapak Reza now.** Do not wait for him to call you. Customers who receive a proactive call from their RM during a market drop are far more likely to stay calm, stay invested, and remain loyal to the bank. This is the most important thing you can do today.

★ **At the meeting — propose a partial rebalancing.** Suggest moving Rp 50–75M from the equity fund into a Fixed Income Fund (Reksa Dana Pendapatan Tetap). This reduces the risk in his portfolio without selling everything. He keeps some exposure to the market recovery while feeling more protected.

→ **In 45 days — when his Deposito matures.** Do not let it auto-renew without a conversation. This is a good moment to discuss whether to keep it in a deposit or redeploy into a government bond (ORI) or a balanced fund to take advantage of any market recovery.

✓ **Within 2 weeks — schedule a portfolio review meeting.** Sit down with Bapak Reza and review the full picture. Show him where his portfolio stands, explain the recovery outlook, and agree on a plan going forward. This turns a crisis moment into a relationship-deepening opportunity.

WHAT TO SAY IN THE CALL

★ "Bapak Reza, kami menghubungi karena kami memantau kondisi pasar dan ingin memastikan Bapak mendapat informasi langsung dari kami. Reksa Dana Saham Bapak memang terpengaruh, tapi ORI dan Deposito Bapak aman — boleh saya jelaskan situasinya secara lengkap?"

→ Reassure him with history: "Situasi seperti ini pernah terjadi sebelumnya — pada 2020 pasar turun lebih dalam dari ini dan pulih dalam 5 bulan. Menjual sekarang akan mengunci kerugian menjadi permanen,

sedangkan kalau kita tetap sabar, potensi pemulihannya masih ada."

→

If he wants to do something: *"Kalau Bapak ingin mengurangi risiko, kita bisa pindahkan sebagian ke produk yang lebih stabil — tidak harus semua dijual. Saya bisa siapkan beberapa opsi sebelum kita bertemu."*

✓

Close the call by booking the meeting: *"Boleh kita jadwalkan pertemuan minggu ini? Saya ingin duduk bersama Bapak dan susun strategi yang tepat berdasarkan situasi portofolio Bapak secara keseluruhan."*

WHAT THE MARKET IS EXPECTED TO DO

→

Most market analysts expect the Jakarta Stock Exchange to stabilise and begin recovering in Q3 2026 (July–September), as US–Asia trade discussions are expected to progress. Indonesia's economy is still growing at 4.8% — the domestic fundamentals are healthy.

✓

Bank Indonesia may reduce interest rates later this year. When interest rates go down, it typically pushes money back into stocks and mutual funds — which is good for Bapak Reza's equity fund. Staying invested positions him to benefit from that shift.

THREE THINGS NOT TO DO

!

Do not recommend selling everything. Selling the entire equity fund now would turn a paper loss into a real, permanent loss of Rp 45.75M. Once sold at the bottom, he cannot participate in any future recovery.

!

Do not delay the call. Every day without contact increases the risk that Bapak Reza becomes anxious, makes a decision on his own, or considers moving his money to another bank. The first call should happen today.

→

Do not open with the loss number. Start the conversation by acknowledging the market situation broadly, then confirm his stable positions (ORI and Deposito are fine), and only then discuss the equity fund impact. This framing keeps the customer calm and receptive.
