

Product Recommendation AI Analysis

Friday, 05 June 2026 23:28

ABOUT THIS CUSTOMER

Ibu Sari Wijaya is 42 years old with a monthly income of Rp 85,000,000. She has **Rp 620,000,000 in total savings and investments** with Danamon, two children aged 10 and 13, and a 5–10 year investment window. Her two main goals are growing her wealth over time and making sure her children's university fees are covered.

Her current portfolio is **too heavily concentrated in deposits** — Rp 300M sits in a Deposito earning a fixed rate, which is safe but not growing. For someone her age with her income and timeline, she has room to put some funds into products that can grow faster without taking on excessive risk.

Based on her profile, three products are a strong fit right now, plus a dedicated education savings plan for her children. The AI has cross-checked these against customers with a similar background — the results consistently show good outcomes for this combination.

RECOMMENDATION 1 — REKSA DANA SAHAM (EQUITY FUND)

Reksa Dana Saham Growth · 5–10 Year Horizon

Suggested placement **Rp 100,000,000**

Expected annual growth **9–12% per year (long-term avg)**

Best for **Wealth growth over 5–10 years**

Risk level **Medium — value can go up and down**

Minimum hold period **3–5 years recommended**

Why recommend this to Ibu Sari? Right now, only 32% of her savings is in growth products (her existing Reksa Dana Campuran). For someone aged 42 with stable income and a 10-year horizon, putting some funds into an equity fund is entirely appropriate and could meaningfully grow her wealth. Adding Rp 100M brings her growth allocation to a healthier level. The key message for the RM: this is not a gamble — it is a planned, long-term placement that she does not need to touch for several years.

RECOMMENDATION 2 — ORI-027 GOVERNMENT BOND

ORI-027 Obligasi Negara Safe Income · Government Guaranteed

Suggested placement **Rp 150,000,000**

Interest rate **6.5% per year (fixed)**

Annual income earned **Rp 9,750,000 (paid every 6 months)**

Guaranteed by **Government of Indonesia**

Subscription closes **30 May 2026 — limited window**

Why recommend this? Ibu Sari currently has no government bonds in her portfolio. ORI-027 is one of the safest investments available — it is backed by the Indonesian government, pays a fixed 6.5% per year, and pays out every 6 months. It gives her a predictable income stream while her equity fund works on long-term growth. This is a good balance: one product grows, the other pays regular income. Subscription closes 30 May 2026, so act now.

ORI-027 subscription window closes 30 May 2026. Process before the deadline.

RECOMMENDATION 3 — REKSA DANA PENDAPATAN TETAP (FIXED INCOME FUND)

Reksa Dana Pendapatan Tetap Stable Returns · Flexible Access

Suggested placement **Rp 100,000,000**

Expected annual return **5–7% per year**

Can withdraw anytime? **Yes — within 1–3 business days**

Risk level **Low — less volatile than equity**

Dividend option **Quarterly payout available**

Why recommend this? This product sits between a Deposito (very safe, locked) and an equity fund (higher growth, less liquid). It earns more than a standard deposit but can still be accessed within a few days if Ibu Sari needs the money for something important. It is ideal as a medium-term buffer — funds she does not need to touch for a year or two but wants to keep accessible. It rounds out her portfolio with a stable middle layer.

CHILDREN'S EDUCATION FUND

Danamon Asuransi Pendidikan is specifically designed for parents like Ibu Sari. A monthly premium of Rp 5–8M builds a guaranteed education fund that pays out when each child reaches university age — Child 1 in 2030, Child 2 in 2033. Importantly, the payout amount is **guaranteed regardless of market conditions**.

Why this matters: Without a dedicated education fund, Ibu Sari would need to sell other investments to pay for university — possibly at a bad time in the market. This product removes that risk entirely. Her children's education is locked in, no matter what happens to the economy or equity markets between now and 2030.

The product also includes life insurance coverage, meaning if anything happens to Ibu Sari, the policy continues to fund the children's education automatically. Customers with a similar profile who enrolled in this product consistently rate it highly and almost never withdraw early.

ADDITIONAL PRODUCTS TO MENTION

Upgrade Tabungan to Premium Saving Account: Her current Tabungan balance of Rp 120M qualifies for the Premium Saving Account, which pays a higher daily interest rate. This is a free upgrade, takes 5 minutes to arrange, and she earns more from money she already has parked here.

Travel & Medical Insurance Bundle (through Adira partner): Rp 8.5M/year for family coverage — covers her and both children for travel and medical emergencies. Given her income level and two dependants, this is strong value and a natural conversation to have once she has decided on the investment products.

HOW TO OPEN THE CONVERSATION

"Ibu Sari, kami sudah me-review portofolio Ibu dan menyiapkan beberapa rekomendasi yang menurut kami paling cocok untuk tujuan keuangan Ibu — mulai dari pertumbuhan jangka panjang sampai jaminan dana pendidikan untuk putra-putri Ibu."

"Yang menarik, ada kesempatan bagus sekarang karena ORI-027 masih buka sampai akhir bulan ini. Kalau Ibu tertarik, kita bisa proses sekalian hari ini sebelum window-nya tutup."

Tip for the RM: Start with the education fund if Ibu Sari seems to respond strongly to family topics. Parents often connect emotionally with a product that protects their children's future — use that as the anchor before moving to the investment products.
